

Shadow Governance

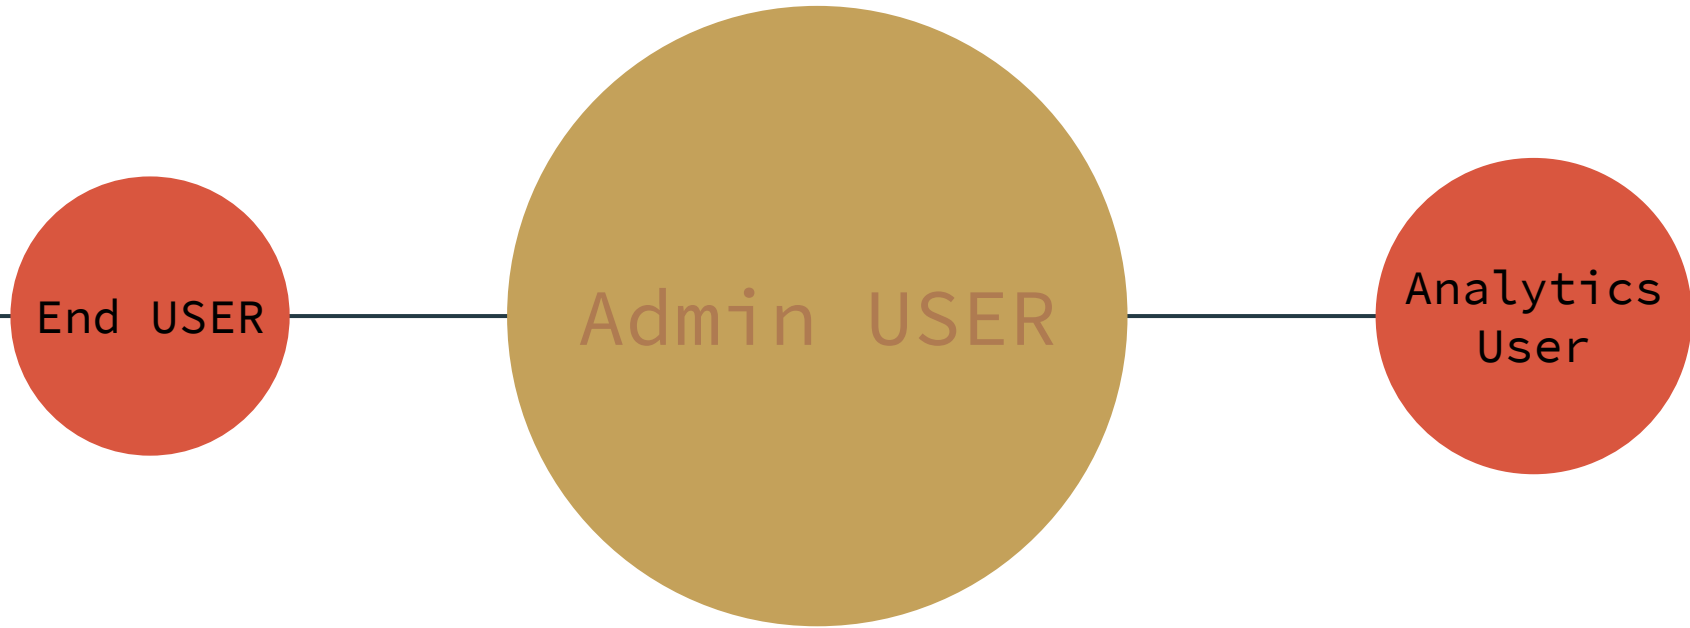

YOGESH DIXIT

About

Central Fresher Management Group (CFMG) wants to understand what the Freshers are doing once they are deployed as a shadow in a project. For the same, CFMG needs an application to be built which is capable of collecting the information on what they are doing during their shadow time, store this data in a database and later allow CFMG to create reports using filters and later download the same in an excel format to do required analysis

Interfaces

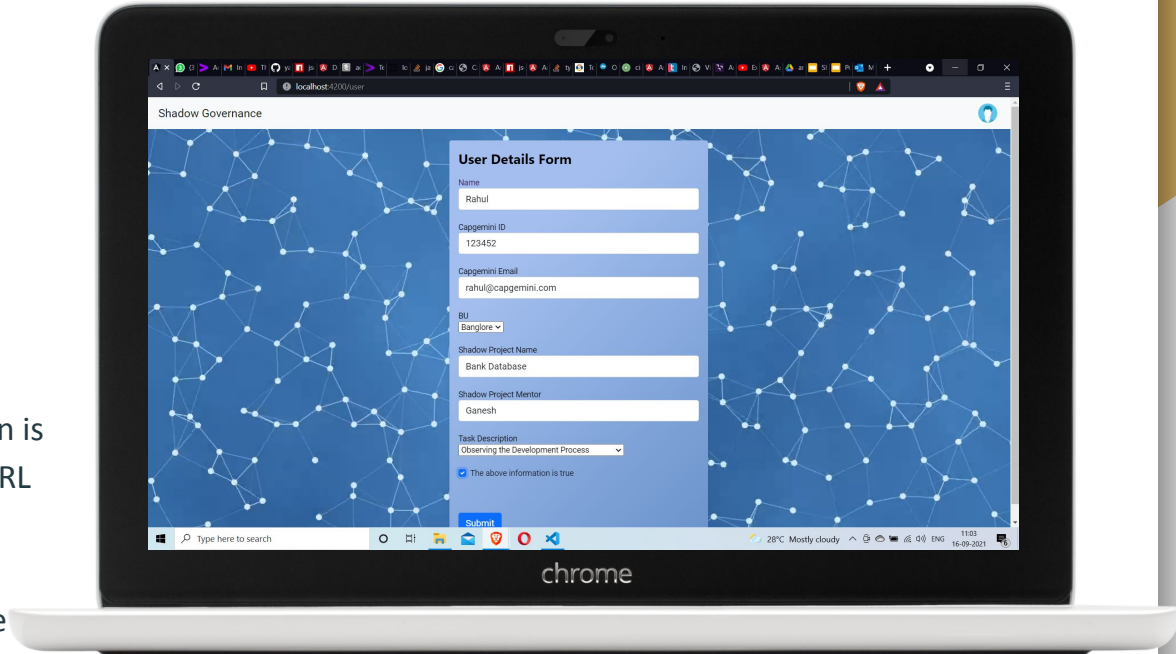

Project samples

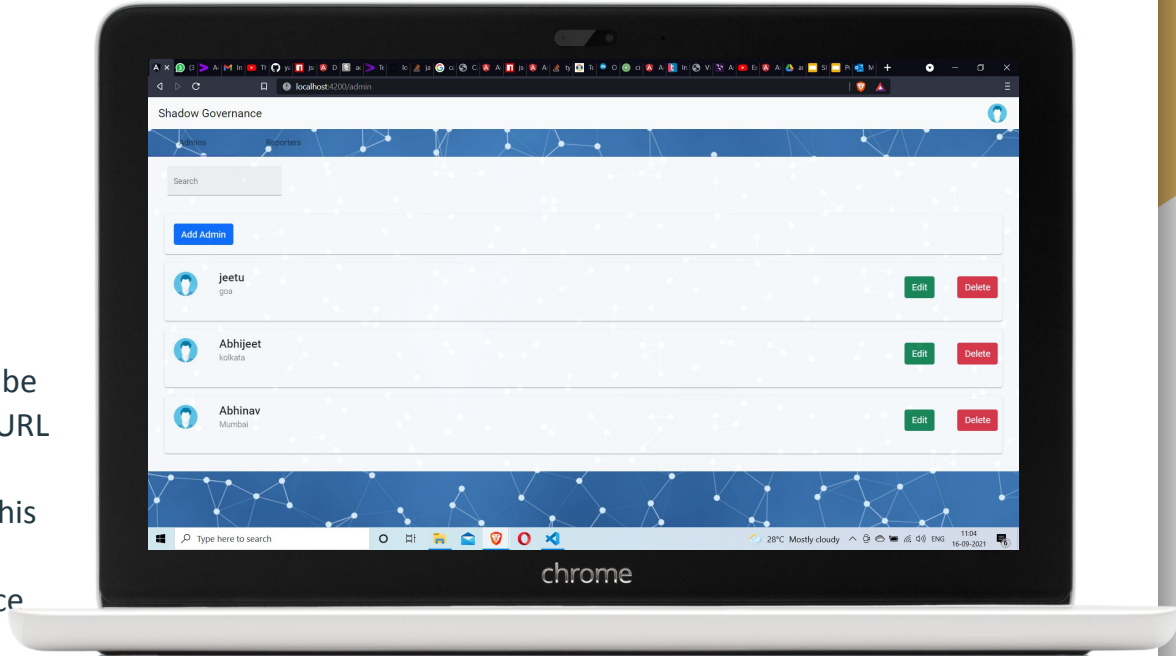

End User Interface

End User Interface : This UI is for the freshers to enter the data. Expectation is that, the user enters a URL and this URL should open up this UI (No Login or Registration required). This UI should allow the user to enter the data in the appropriate fields and save the data.

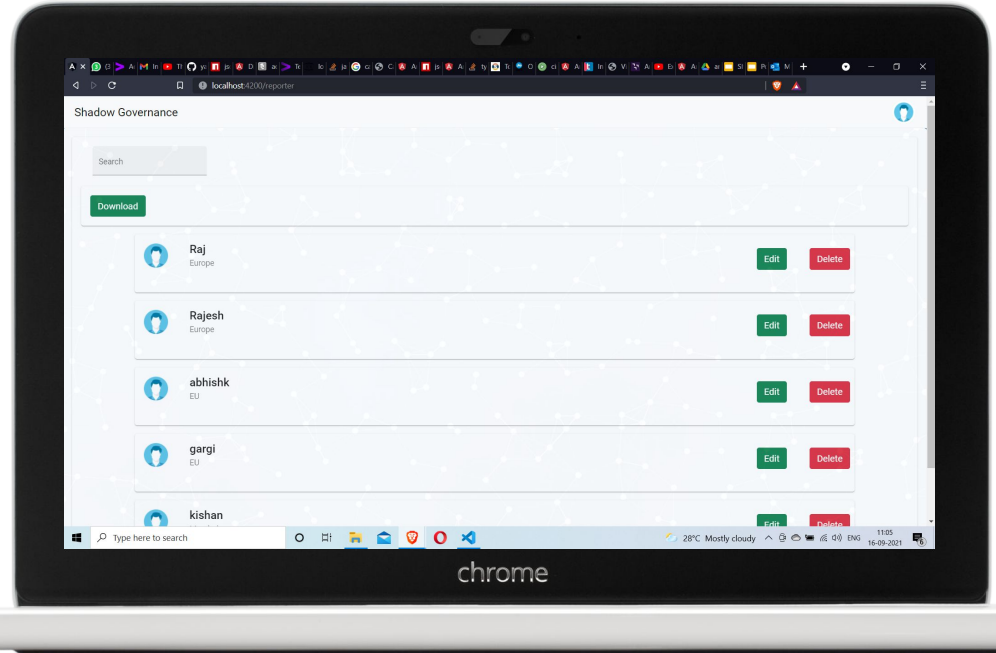

Admin User Interface

Admin User Interface : This UI should be launched either through a dedicated URL or from an Admin Login Link which is available on the End User Interface. This UI should accept the user id and password for the Admin login and once validated, the Admin should have an option to create other users who can be Analytics Users

Analytics User Interface

Analytics User Interface : This UI should be launched either through a dedicated URL or from an Analytics Login Link which is available on the End User Interface. This UI Should give provision for filters and based on the filters chosen a report should be generated and should be available for download as an excel sheet.

Thank You
